Java

```java
class Solution {
    public int buyChoco(int[] prices, int money) {

    }
}
```

JavaScript

```javascript
/**
 * @param {number[]} prices
 * @param {number} money
 * @return {number}
 */
var buyChoco = function(prices, money) {

};
```

C++

```cpp
class Solution {
public:
    int buyChoco(vector<int>& prices, int money) {

    }
};
```

C#

```csharp
public class Solution {
    public int BuyChoco(int[] prices, int money) {

    }
}
```
